

Geoanalytical Laboratories Uranium

Serving the Uranium Industry for more than 35 years

SRC's Geoanalytical Laboratories in Saskatoon have grown with the increase in uranium and gold exploration in Saskatchewan. Our reputation for high quality analytical services now makes the lab a world class facility.

Building on our core expertise, the lab is continually improving services by providing comprehensive uranium, gold, and base metal analytical packages to suit your exploration needs.

Our location in Saskatoon makes for convenient testing for exploration companies working in Saskatchewan; and also provides a centre of analytical excellence for Canada and the rest of the world.

The lab has been instrumental in providing high quality analytical resources that have helped in the development of uranium exploration and mining in Saskatchewan and around the world. Maintaining good relationships with our customers has enabled the lab to follow the direction of the industry to the required standard of quality.

Services

Uranium

- U₃O₈ (Wt%) (ISO/IEC 17025:2005 accredited method)
- ICP-OES multi-element analysis
- ICP-MS multi-element analysis
- Uranium by fluorimetry analysis

Gold and Base Metals

- Gold by Fire Assay
- Gold & precious metals analysis
- Whole rock analysis
- Rare Earth Element (REE) analysis

All details of these and other services are available in our fee schedule on our website at www.src.sk.ca Follow the link under Labs/Facilities.

Geoanalytical Labs offer facilities which are licensed by the Canadian Nuclear Safety Commission (CNSC) to safely receive, process, and archive radioactive samples from your projects.

Quality

Our facility is ISO/IEC 17025:2005 accredited by the Standards Council of Canada (scope of accreditation #537).

The laboratory also participates in regular interlaboratory tests for many of our package elements.

More information is available on our website at www.src.sk.ca

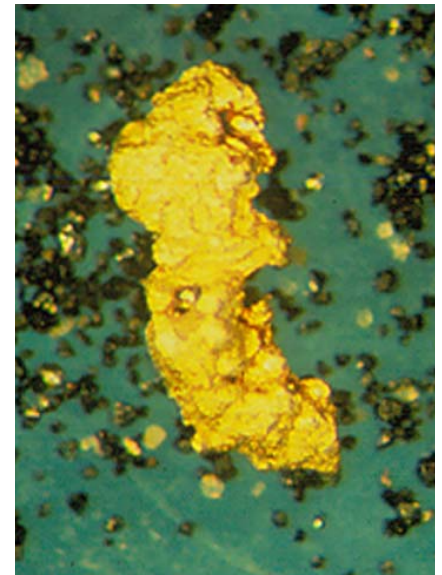

What they're saying about the Uranium Lab

Hathor Exploration Limited is one of the most aggressive junior uranium explorers in the Athabasca Basin of northern Saskatchewan. With the Saskatchewan Research Council having the experience of providing more than 35 years of analytical services to the world uranium leaders, we know that Hathor can count on the Geoanalytical Laboratories for uncompromised quality and service when it comes to uranium analyses."

Stephen Stanley, President Hathor Exploration Limited

SRC's Geoanalytical Laboratories are world renowned for providing accurate, high quality analytical services you can trust to meet the needs of your exploration program.

The Geoanalytical Team: Our people make all the difference. At SRC's Geoanalytical Laboratories we strive to keep up with the growth in industry and the needs of our customers.
