

Plant Ecology Research and Development Services

Offering professional, applied plant ecology science and technology, the Saskatchewan Research Council (SRC) aims to help industries, communities and governments understand, conserve and manage natural landscapes.

SRC has scientific expertise and many years of experience related to the natural ecosystems of Saskatchewan. Projects focus on applying this knowledge to practical land management issues. SRC experts have worked on grasslands, forests and wetlands in every part of Saskatchewan and around the world.

Services:

- Ecological inventory, classification and mapping
- Assessment and management of rangelands
- Wildlife habitat studies
- Ecosystem management plans for specific areas
- Information and planning for conservation of biodiversity
- Impacts of climate change on grasslands and strategies for adaptation
- Information systems for ecosystem management
